

Grade 3 (Age 8) — Levels and Gameplay

Continuation of the Kindergarten format in FINAL DEFENSE DELIVERABLES.pdf

Basis: MATATAG-Curriculum-Grade-2-10-English.pdf (pp. 61–76) and Age 8 ASHA-Aligned Speech Sound Development Word List for Pre-Assessment.pdf.

Design principle: Grade 3 progresses toward complex integration, /th/ mastery, /zh/, multisyllabic complexity, and fluent connected speech. The ASHA-aligned words are sample assessment targets, not a fixed word bank.

■■ Island 1: “Regional Discovery” — Quarter 1

MATATAG Focus: Regional themes, high-frequency and content-specific vocabulary, CVCC/CCVC/VCV/VCCV words, sentence types, story comprehension, and retelling.

ASHA Target (Age 8): /th/ voiceless and voiced, /zh/, multisyllabic complexity; reduction of Stopping, Initial/Final Consonant Deletion, and Weak Syllable/Syllable Reduction where applicable.

Level & Name	DepEd MATATAG Focus	Phonological Target & Process	Flutter UI Template & Mechanics	Dynamic Content Injection
1.1: Regional Word Explorer	Identify Grade 3 sight words; read CVCC, CCVC, VCV, and VCCV words.	/th/ and /zh/; Stopping and deletion review.	TapAndPopWidget (Word Explorer): Tap floating regional objects and pronounce the displayed word to collect them.	Default: Grade 3 sight words and regional vocabulary. Error Target: AI increases words containing the child's unresolved /th/ or /zh/ sound.
1.2: Sound Contrast Canyon	Identify vocabulary and distinguish words according to meaning and function.	Voiced /th/ vs. voiceless /th/; Stopping.	MinimalPairWidget (Sound Match): Match audio/picture cards based on the target sound.	Default: mixed Grade 3 vocabulary. Error Target: dynamically generates contrasts emphasizing the child's incorrect /th/ production.
1.3: Multisyllable Mountain	Read and use words accurately according to word patterns; identify roots of high-frequency words.	Multisyllabic complexity; Weak Syllable/Syllable Reduction.	SequenceJumperWidget (Syllable Climb): Child climbs one platform per correctly produced syllable.	Default: 2–4 syllable Grade 3 words. Error Target: increases multisyllabic words where the child omits or reduces syllables.
1.4: Regional Story Quest	Sequence 4–5 events; identify problem/solution, character traits, cause/effect, predict endings, and summarize.	/th/, /zh/ and multisyllabic words in connected speech.	EchoCaveWidget + SequenceJumperWidget (Story Quest): Arrange events then narrate the completed sequence.	Default: regional-themed story. Error Target: AI rewrites story vocabulary/sentences to naturally contain the child's target sounds.

■ Island 2: “Science & Math Expedition” — Quarter 2

MATATAG Focus: Regional and content-specific topics, Mathematics and Science vocabulary, synonyms/antonyms, word roots, simple and compound sentences.

ASHA Target (Age 8):/th/, /zh/ and multisyllabic words in increasingly complex phrases and sentences.

Level & Name	DepEd MATATAG Focus	Phonological Target & Process	Flutter UI Template & Mechanics	Dynamic Content Injection
2.1: Science Lab Hunt	Use Science and Mathematics content-specific vocabulary.	/th/, /zh/; Stopping review.	BucketSortWidget (Science Sort): Sort objects into Science/Math categories while saying each word.	Default: age-appropriate Science and Math terms. Error Target: prioritizes terms containing the child's target phoneme.
2.2: Word Root Reactor	Identify roots of high-frequency nouns, verbs, and adjectives; identify synonyms and antonyms.	Multisyllabic production; Syllable Reduction.	TapAndPopWidget (Root Reactor): Tap words to reveal their root and pronounce both forms.	Default: common Grade 3 roots and word families. Error Target: selects longer words containing unresolved syllable or phoneme patterns.
2.3: Sentence Builder Lab	Identify and construct simple sentences; identify parts of sentences and use correct intonation.	/th/, /zh/ at phrase/sentence level.	EchoCaveWidget (Sentence Lab): Arrange sentence components and record the completed sentence.	Default: simple Grade 3 sentences. Error Target: AI inserts target phonemes while maintaining the required grammatical structure.
2.4: Compound Sentence Bridge	Identify two independent clauses and the coordinating conjunction in compound sentences; use correct punctuation.	Connected /th/, /zh/ and multisyllabic vocabulary.	SequenceJumperWidget (Clause Bridge): Each correctly spoken clause builds another section of a bridge; child connects both clauses.	Default: age-appropriate compound sentences. Error Target: generated clauses contain repeated but natural target sounds.

■■ Island 3: “National Heroes Adventure” — Quarter 3

MATATAG Focus: National themes, Science/Mathematics vocabulary, demonstrative pronouns, compound sentences, five-event stories, and informational texts.

ASHA Target (Age 8):Integrated /th/, /zh/ and multisyllabic production during longer phrases, sentences, and narrative speech.

Level & Name	DepEd MATATAG Focus	Phonological Target & Process	Flutter UI Template & Mechanics	Dynamic Content Injection
3.1: Hero Vocabulary Hunt	Use vocabulary relating to national themes and content-specific topics.	/th/, /zh/.	TapAndPopWidget (Hero Hunt): Tap historically themed objects/characters and pronounce their names.	Default: national-theme vocabulary. Error Target: target words containing /th/ or /zh/ are increased.
3.2: Meaning Match Arena	Identify synonyms, antonyms, verbs, adjectives, and demonstrative pronouns.	/th/ voiced/voiceless contrast; /zh/.	MinimalPairWidget (Meaning Match): Match words with synonyms/antonyms while verbally producing the selected word.	Default: Grade 3 vocabulary. Error Target: word choices favor unresolved phonemes without sacrificing the semantic competency.
3.3: Five-Step Hero Journey	Sequence at least five events; identify problem/solution, feelings/traits, cause/effect, prediction, and summary.	Multisyllabic words + /th/, /zh/ in connected speech.	SequenceJumperWidget (Hero Journey): Jump through five chronological story checkpoints while narrating each event.	Default: five-event national-theme story. Error Target: target sounds are naturally distributed across all five checkpoints.
3.4: National Story Studio	Retell myths, legends, fables, and narrative poems using one’s own words.	Connected-speech fluency; multisyllabic integration.	EchoCaveWidget (Story Studio): Listen to a short story, then record a retelling using visual story prompts.	Default: age-appropriate Philippine-themed narrative. Error Target: prompts emphasize unresolved sounds while preserving the learner’s own retelling.

■ Island 4: “National Knowledge Expedition” — Quarter 4

MATATAG Focus: National themes, content-specific vocabulary, simple and compound sentences, informational texts, procedural/descriptive/explanatory texts, and summary.

ASHA Target (Age 8):Complex integration — /th/ voiced/voiceless, /zh/, multisyllabic words, and connected narrative speech.

Level & Name	DepEd MATATAG Focus	Phonological Target & Process	Flutter UI Template & Mechanics	Dynamic Content Injection
4.1: Knowledge Vault	Read Grade 3 sight words and use national/content-specific vocabulary.	/th/, /zh/ and multisyllabic complexity.	BucketSortWidget (Knowledge Sort): Categorize words by topic while pronouncing each target.	Default: national, Science, and Mathematics vocabulary. Error Target: increases the child’s unresolved phonemes.
4.2: Information Trail	Identify five significant details, problem/solution, and text types in informational texts.	/th/, /zh/ in informational vocabulary.	TapAndPopWidget (Fact Trail): Tap information icons and verbally identify each fact to unlock the next area.	Default: short Grade 3 informational text. Error Target: AI selects facts containing target phonemes.
4.3: Explain-It Challenge	Express ideas through time-order/procedural, descriptive, and explanatory texts.	Multisyllabic + connected-speech mastery.	SequenceJumperWidget (Explain-It Path): Arrange steps in order, then verbally explain the sequence.	Default: 4–5 step procedure. Error Target: procedure vocabulary is regenerated around unresolved phonemes.
4.4: Grand Knowledge Quest	Summarize narrative/informational texts, draw conclusions, and express ideas using Grade 3 text types.	Cumulative /th/, /zh/, multisyllabic and connected speech mastery.	EchoCaveWidget + SequenceJumperWidget (Grand Quest): Read/listen, organize information, then record a short summary or explanation.	Default: national/environmental/science-themed task. Error Target: personalized prompts repeatedly but naturally target the child’s remaining errors.

■ Grade 3 / Age 8 Speech-Sound Progression

Screening Result	Grade 3 Target	Adaptive Gameplay
Stopping of /th/	Voiceless /th/ and voiced /th/	Increase /th/ words, then phrases and sentences; provide auditory/model feedback.
Initial Consonant Deletion	Initial consonants, especially /th/	Increase initial-position target words and use visual highlighting of the missing sound.
Final Consonant Deletion	Final /th/ and other word-final consonants	Increase final-position words such as sample mouth/smooth targets.
Syllable Reduction	Multisyllabic words	Increase 3–5 syllable words and use syllable-by-syllable gameplay.
/zh/ substitution/stopping	/zh/	Increase words containing /zh/, especially medial-position words such as the sample treasure target.
No significant error	Complex integration	Move from words → phrases → sentences → narrative/informational speech.

■ Recommended Grade 3 Difficulty Progression

Grade 2: /l/, /r/, /v/, /ch/, /j/ + R-clusters → word → phrase → sentence → connected speech.

Grade 3 / Age 8: /th/ + /zh/ + multisyllabic complexity → word → multisyllabic word → phrase → simple sentence → compound sentence → narrative/informational speech.

■■ **Defense Note:** The Age 8 reference provides sample assessment targets such as Thumb, Toothbrush, Mouth, They, Feather, Smooth, Treasure, Helicopter, Vegetable, and Spaghetti. These should not be presented as the complete Grade 3 word list. They are seed/reference examples for the dynamic content system.

Recommended AI adaptation: Detected phoneme/process → word position → syllable complexity → MATATAG competency → gameplay level.
